Smart meters have been proven to negatively affect the human body.

There are three clinicians who have three different measuring devices to prove this.

1) Dr. Dietrich Klinghardt has shown that smart meters change blood tests. Patients have normal blood tests for ten years then date coincident to getting a smart meter installed, their blood panels change. It has been shown to lower 7 hormones and raise an 8th hormone.

2) Dr. Frank Springob has shown smart meters negatively affect blood by using a Darkfield Microscope. This microscope shows live blood as opposed to most microscopes which shows dead specimens in the blood. In the presence of a smart meter, the blood clumps together. This is a malfunctional state.

3) Dr. Magda Havas has used a computer test called the Heart Rate Variability Test to show that smart meters affect the nervous system and the heart. In the presence of radiofrequency, some people's heart beat irregularly. I have personally duplicated this test in my own office.

4) Here is a website with over 1,000 studies showing harm to the body from electromagnetic frequencies and radiofrequencies.
